

Safex Aerospace Systems GmbH is a special purpose company established nearly four decades ago to focus the collective core competencies of a number of international aerospace and defense companies. This is done by unifying, integrating and applying their core technologies originating from throughout the European Union, the United States, Asia and other regions into cohesive singular solutions for military customers across air, land, sea, space, and cyber environments.

Using an international team of experienced scientists and engineers whose talents emanate from differing cultures and thought processes, and merged into a harmonious team of specialized product teams, Safex fuses a collective of advanced problem-solving techniques and technologies into working solutions. The result is synergistic power based on the best of the world's human talent and technological resources; all readily available and accessible through Safex's world class network of associate group companies.

Safex is uniquely suited to engage in programs requiring a high level of research, development, test, evaluation, manufacturing, integration, delivery and support of turnkey aerospace and defence solutions from the component, sensor and sub system levels to large-scale integrated systems of systems.

As an advanced aerospace company, Safex does its utmost to maintain world leader status for all its associate companies in the following main areas of activity:

- Space Systems
- Precision Defense Systems
- Special Mission Aircraft
- Unmanned Aerial Systems (UAS)
- Intelligence Systems
- Passengers to Freighter Aircraft Conversions and Large Aircraft MRO
- Upgrading and modernizing air and naval platforms
- Command and Control Systems
- Cyber Solutions
- Robotics (naval and ground)
